The first indoor picnic table

Go ahead: have a PicNic in the office! Once again BuzziSpace is taking offices to a new level. But this time, in-house designer Alain Gilles is going a step further with the BuzziPicNic.

Now you can work, have a meeting, stop for lunch or enjoy a beer with your coworkers at the same multifunctional table. Open the windows and get the barbecue going!

Wood Disclaimer

Every tree is unique

Wood is a natural product and has variations. While we do our utmost to provide you with the finest and almost identical wood products, it is almost impossible to find two trees that are alike.

Following from the organic nature of wood, it develops its own character throughout the growth process, which is reflected in color, knots and structure. Every tree is unique, and therefore slight variations will appear in every piece of furniture.

The role of humidity

Over time, all wood products will absorb and release moisture. Consequently, humidity plays a crucial role in the right treatment of your wood products. Under dry conditions, low humidity levels, the wood shrinks and small cracks and splits can occur. On the contrary, high humidity levels will make the wood expand and restore cracks caused by dry conditions.

Please be aware, even weather changes can potentially prompt changes in wood, especially during months of high humidity levels and opposite during winter times when additional indoor heating is used, thereby making the air dryer.

Therefore, we advise to ensure a constant level of humidity through the use of humidifiers or water evaporators. Ideally, the indoor humidity levels must be between 50% and 60%.

Take good care of your wood products

To ensure maximum lifetime of wood products, good maintenance is key. Therefore, we would like to highlight a few measures you can take to avoid any unnecessary changes and/or damages to your products.

By placing your wood products in direct sunlight, color differences may occur over time. The same holds true for tableware that is placed on a table. Avoid placing any hot objects directly on the wood as this may cause rings to form.

As stated previously, wood is sensitive to moisture. Therefore, wipe off any excessive liquids immediately. Clean stain and veneer wood with a damp cloth, and if necessary, use an appropriate cleaning agent. Don't use any shaving or polishes that contain silicone as this may prompt permanent stains.

Remember, all types of wood are organic materials and the creation of small cracks and splints are natural consequences. Therefore, complaints that can be derived from this, will not be accepted
